BULGARIA EE 1

almost all farms have high walls of unfired brick which are topped with a small roof of straw. The large gateway is also roofed over and has a small door for people. In the eastern Marica plain the fence is of wickerwork or consists merely of a hedge (Gellert, 1937: 161-62). In eastern Bulgaria the enclosure, if present, is a low one of brushwood (Gellert, 1934: 8). 351 184

In the Marica plain there appears to be a difference between the enclosures in the east and west that cannot be attributed to the presence or absence of the necessary raw materials. Gellert believes that the high enclosures in the west are due to a persistence of Turkish traits (Gellert, 1937: 162). Also, in Sredna Gora and the Sub-Balkan basins high walls are limited to the west (Gellert, 1937: 162). [177]

In the mountains and the Sub-Balkan basins the yards are small and crowded together because there is little arable land (Gellert, 1937: 164). When the enclosures are of stone the yards are rectangular; when the fences are of wood or hedges the yards are often rounded and there is often much free land between the separate yards (Gellert, 1937: 165). 351 [311]

Since the houses are generally built to shelter both men and farm animals and have a number of annexes built onto them, one would expect fewer separate farm buildings. Barns are not typical of central Bulgaria. In Ihtiman we find two-roomed barns made of timber-framing and mud. The eaves may be extended and supported by pillars to form a shelter. Only in the extreme east of the Marica plain are barns widespread. Here a small side annex is added to the barn; the entrance is on the short side where the eaves are extended to form a shelter (Gellert, 1937: 158). In Juricite one finds Turkish store houses being used by the Bulgarian population, although in east Bulgaria they are used almost exclusively by the Turks (Gellert, 1937: 160). These are large buildings of woven brushwood with a straw roof that extends far out to the sides. They are generally built on an incline. The entrance is on the short side and the back is rounded (fig. 39) (Gellert, 1934: 3). In Karlovo Basin one finds store houses of wickerwork with straw roofs which have poles attached to the ridge to prevent the straw from being blown away (Gellert, 1937: 159). Stables for sheep in east Bulgaria are long narrow huts of stone covered with straw or reed (Gellert, 1934: 3). In general the various sheds and shelters for animals are of poor construction and have no particular regional characteristics (Gellert, 1937: 159). 343 184 [177]

Summer kitchens are numerous; they are either built onto the house or are in the open, in which case they are covered by a roof of straw, reed, brushwood or brick that is supported on four poles (Gellert, 1937: 160; 1934: 3). 343 [342]

Buildings Outside the Village. Outside mountain villages one finds shepherds' huts of brushwood, round or rectangular in shape, 342 233

This type of house is as a rule in the middle of a large courtyard, surrounded by a plaited fence; the secondary parts of the housing, such as stable, hay-barn, cereal store, etc. are dispersed into this yard.

In Southern Bulgaria, the Bulgarian farmers' houses do not present any difference from the rural houses of the Greeks, who were established there many centuries ago in the areas of Kavakli and Messimvria, as I have described them in my survey Θρᾳκικαὶ Οἰκήσεις (pp. 27-29 and 43-44), or from the houses of Southern, Eastern and Western Thrace. This is evident from the plans of two houses, one from the village of Macrolivado (Ouzountsovo) of the Chaskovo district (fig. 33) and the other from the Karatoprak village, of the Philippople district (fig. 34).

The first one was built in 1780; it consists of two main rooms, completely separated from each other, and of a portico which originally covered all the frontage of the house. The small room (odaja) on the right hand end of the portico is an addition of recent years. According to Zlatev «the existence of a fire place in both rooms is not normal» (p. 104) «and it is characteristic to note that the hearth in the main room, the kăsta, has been built on the external wall». In the other room, called here «zantsa», the hearth has derived from repair and it is obvious that the use of the other room was different, namely it was used to stabling the cattle or storing fruits, ect., as it is usual in the rural houses of Southern Thrace(1). On one end of the building, in line with the two rooms, the oven has been built on one end of the portico, which is often seen in other parts of Thrace. Zlatev says that, «the division of space was not changed in bigger houses, possessing more rooms. The additional spaces are placed in line, and the portico is increased by expansion along the entire lengthened frontage of the house(2). When this lengthening is extended too much, and the length has an oppresive influence on the external appearence, the portico is then adapted so that it is extended outwardly from its centre, in the shape af a square, thus very much reminding the shape ot the mountainous house» (Zlatev, p. 104).

The same is noted in the house of the Karatoprak village (built in 1912) which is tripartite and consists of two rooms and a stable, but a part of one of its rooms (of the soba) has been separated and formed a special space which was called, from the Greek language,

from the other purely valley type houses, such as the houses of the Hevros or the Plevna valleys» (p. 95). 342

The house of the village of Divlia, Radomir district, (fig. 37) is a «typical bipartite valley building with a portico all along its frontage» (Zlatev, p. 98), and that of the village of Grigorevo, Novo-Celo district, (fig. 38 and 39) is only slightly elevated from the ground and includes, apart from the two spaces, basic for every valley house (the kăsta and the soba), one cellar in line with these spaces, and a small room on the front of the house which, together with the portico, forms a wing,

(Zlatev, Bulg. kăsta fig. 82)

coming out of the main body of the building. All the rooms have an earthern floor, covered with clay. The hearth is in the kăsta, i.e. the «house», on the wall separating the two rooms and has next to it two built-in cupboards (dulapze). Opposite the hearth, on the other inner wall, there is the pitcher shelf. The bread-oven, the stable and the other buildings, essential for rural life, are to be found in the large courtyard. This is surrounded by a two metres high wall, made of unbaked bricks and covered with tiles (Bulg. keramidi). The entrance door is double, and wide enough to permit the entrance of carts, but next to it there is another door for the entrance of people. The
